

Define CS, fit into CC

1. CUSTOMER SEGMENT(S)

CS

Who is your customer?
i.e. working parents of 0-5 y.o. kids

- **Students and teachers** of the school who raise IT support tickets (Wi-Fi, projector, password and slow-computer issues).
- **School IT helpdesk agents** who receive, review and route these tickets.

CC

6. CUSTOMER CONSTRAINTS

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

- Limited IT staff available to review every incoming request manually.
- Tickets must be classified correctly using standard Category and Subcategory values (dependent choices).
- The solution must be no-code and easy for the school to maintain. Users need confirmation that their request has been submitted. Process must handle growing request volume without extra effort.

AS

5. AVAILABLE SOLUTIONS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

- **Manual review:** IT staff read each ticket and select the category and subcategory by hand.
- Pros: human judgement. Cons: time-consuming, error-prone, inconsistent and not scalable as requests increase.
- **Informing callers manually** that a ticket has been created – adds extra effort for agents.
- **Our solution:** Flow Designer automation classifies tickets on creation and sends an automatic email.

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS

J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

- Classify each incident automatically when it is created (Network / Hardware / Access / Performance).
- Reduce manual effort for IT agents.
- Improve ticket routing efficiency and consistency.
- Notify the caller that the request has been submitted.
- Provide a no-code, easily maintainable solution.

RC

9. PROBLEM ROOT CAUSE

What is the real reason that this problem exists?
What is the back story behind the need to do this job?
i.e. customers have to do it because of the change in regulations.

- The school IT helpdesk receives many incident requests daily from students and teachers on common issues: network connectivity, hardware failures, account access and system performance.
- Categories are assigned manually by IT staff, so the process is slow, error-prone and does not scale as the number of requests grows.

BE

7. BEHAVIOUR

What does your customer do to address the problem and get the job done?
i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

- Students/teachers create an IT support ticket in the **Incident Workflow** table and enter a Short Description (e.g. "WiFi not working in library").
- IT agents currently open each ticket, identify the issue type and manually select the Category and Subcategory.
- Agents then inform the caller that the ticket has been created.

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS

TR

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

- A student or teacher creates a new ticket (Record Created) with the Category field left empty – this triggers the flow.
- Frequent Wi-Fi, projector, password and slow-computer issues reported by students and teachers.

SL

10. YOUR SOLUTION

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality.
If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.
Flow: "Auto Classify School IT Tickets" (ServiceNow Flow Designer)

- **Trigger:** Record Created on Incident Workflow; condition: Category is Empty.
- If / Else If conditions check keywords in the Short Description:
WiFi/Network → Network / Wi-Fi; Projector → Hardware / Projector; Password/Login → Access / Forgot Password; Slow/Hanging → Performance / Slow Computer.
- Update Record sets Category and Subcategory; an automated email is sent to the caller.
Maintained via Update Set (In progress → Complete, exportable as XML).

CH

8. CHANNELS of BEHAVIOUR

- 8.1 ONLINE**
What kind of actions do customers take online? Extract online channels from #7
- Ticket created online in ServiceNow (Incident Workflow form).
 - Flow runs automatically; confirmation email sent to caller.

- 8.2 OFFLINE**
What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.
- Offline (current process): IT agents manually review each request and assign the category and subcategory.
 - Agents inform callers about ticket creation manually.

Problem – Solution Fit Template

Date	30 September 2026
Team ID	SWTID-2026-2046
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**
